

AWS SAA + SysOps + Developer + DevOps Course #Day-10

We will start at **8 AM**,
Stay tuned

RAKESH TANINKI

LEARN TO UNLEARN

Recap:

- JSON – Introduction & Usage
- IAM Advanced
 - **IAM Policies**
 - AWS Managed Policies
 - Inline Policies
 - Customer Managed Policies
- **Demos**

Today's topics:

- **IAM Roles**
 - Same account role assumption
 - Cross account role assumption
- IAM Roles with **EC2**
- Cross Account Assume Role using **AWS CLI - Demo**
- Service linked Role
- Pass Role
- Credentials Report – **Demo**
- Access Analyzer – **Demo**
- **Demos**

Identity based policies

- **IAM Policies** – to manage permissions of IAM identities – Users, Groups, Roles
- **Allow / Deny** access to identities – Deny has priority over Allow
- For SAA exam, you should be **able to understand** the policy

EC2 Instance Roles

EC2 Instance Roles

EC2 Instance Roles

- Credentials are inside **metadata**
- <http://169.254.169.254/latest/metadata/iam/security-credentials/role-name>
- Automatically rotated, always valid
- Roles are preferable than IAM access keys
- CLI / SDK tools use role credentials automatically – no configuration needed

Demo – IAM Role

- Launch EC2
- Test CLI with “aws s3 ls”
- Attach IAM Role
- Test CLI with “aws s3 ls”
- Check the role credentials in metadata
- Precedence of credentials – [click here](#)

Demo - Cross Account Assume Role using AWS CLI

Thank you, will meet in tomorrow's session
